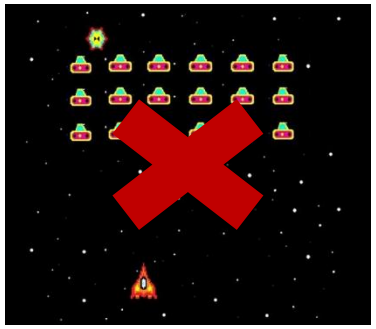
Production of „Space Invaders" type of game

Custom game that can be played on Galaxy S25 Ultra (optional to be played on 43" touch vertical TV)

1. S25 Ultra: 1440 x 3120
2. 43" touch screen: 1080 x 1920

- Game can be designed in HTLM5 for easier playability across devices
- Game has to look good and run smoothly, with all of the required implementations
- Modern pixelated graphics → Do not provide offer with basic look of Space Invaders
- Agency is to find developers who are able to provide a good final product
- Timeline of development has to be written during the bidding process
- Targeted deadline → 24.02.

DO NOT PROVIDE BASIC STYLE



- What will be provided from our side:
  - Text for each of the menus, translations for HR, RS, SI
- <u>What needs to be designed:</u>
  - All of the visuals for backgrounds and menus
  - Sprites for the enemy designs, playable character model and power up icons
- <u>What needs to be done by development agency</u>
  - Develop a working product that has a leaderboard and scoring mechanics
  - Produce animations for menus and all of the sprites, produce gameplay mechanics and shooting animations + sounds
  - Test the different versions and game balance until the final product is made and agreed upon
  - 3 language options to choose (Croatia, Serbia, Slovenia)

Game flow

1. Start screen with new game and current leaderboard status → Player input details + T&C agreement	2. Couple page tutorial explaining gameplay mechanics & story	3. Gameplay	4. Result and leaderboard + play again

Production of „Space Invaders" type of game

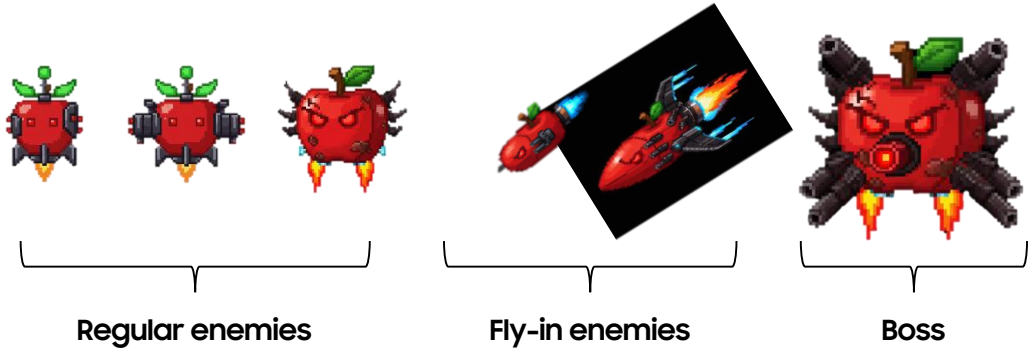
➢ **Gameplay brief**

Enemy characters:

3-4 different types of normal (Row) enemies
- Each enemy has different health status and different attacking abilities and movement patterns
- They spawn depending on the wave and move as regular Space invader enemies
- During spawning of each wave, they need to fly in with animations and assume their positions

2 different types of border screen (Fly-in) enemies
- Each of them has their own speed of targeting the player + damage dealt
- They spawn on the border of the screen during the gameplay loop

1 boss type of enemy
- Spawns in later stages and is harder to destroy
- Has multiple attack patterns
- Moves from left to right of the screen behind the spawned wave



Playable character

Ship with branded S25 on wings
- Possibility to move throughout the screen in all directions
- Has health and can be destroyed
- Upon destruction, respawn is possible
- Possible to use powerups and upgrade weapons during the gameplay

Moving background

- Based on the final provided backgrounds, animate the moving while progressing through the game
- Smooth transition during the gameplay

Example 1

Example 2

Power up options

Usable power up

- Power up that is stored in players on screen UI
- Can be used during the game
- When the power up is picked
    - Game is paused
    - Short explanation popup screen is triggered with benefit explanation
    - Button to proceed to the gameplay
- Dropped during designated places in gameplay when destroying an enemy

- Types of usable power up examples:
    - Destroy all enemies on the screen
    - Slow the gameplay time but do not slow the playable character and his shooting
    - Double the damage for 10 seconds
    - Repair the ship and lost points if the ship is damaged
    - Gain shield for 10 seconds

➢ **Gameplay brief**

Power up options

Weapon power up
- Power up that immediately upgrades the weapon
- Short effect that says something like „Galaxy AI is upgraded"
- Sprite changes to advanced model
- 5 levels of weapon mechanics
    - 1 shot from center
    - 2 shots from left and right
    - 3 shots from left, right and center
    - 2 shots from left and right powered up
    - 3 shots from left, right and center powered up

Additional score
- Dropped by enemies during waves on predefined timeslots
- Gives additional points if picked up

Scoring and waves

Wave setup

- 8 waves in TTL
- Each wave lasts maximum of 40 seconds → If not all enemies are destroyed, the rest of the enemies fly away from the screen and new wave joins
- Cca 5 sec delay between new wave joining
- Boss enters during the wave 6 and stays until wave 8
- When wave 8 is destroyed, only boss remains to be destroyed
- Each wave has different setup of regular enemies and fly-in enemies → TBD during production
- Timer counts down from 7 minutes to finish the game in milliseconds visible

Scoring setup

- Each destroyed wave enemy gives predefined points
- Each picked up score power up gives predefined points
- Each taken shot reduces the points
- If the ship is destroyed → Loose even more points → Players have unlimited number of respawns → Idea is for all to finish the game
- Each remaining millisecond adds up to TTL score during the end game screen
